EDUCATION

Alabama A&M University Huntsville, AL
B.S. Computer Science, Honors Program | GPA: 3.96/4.00 (Summa Cum Laude standing) *Expected May 2027*
Honors: Presidential Scholar, Honors Program Scholar, Dean's List | Coursework: Data Structures, Algorithms, Probability & Statistics

EXPERIENCE

Founder & Product Lead Dec 2025 – Present
MediLink Africa *Remote*

- Identified broken referral communication between Nigerian hospitals and patients through interviews with 4 doctors; designed a platform where hospitals route referrals to partner clinics while patients see exactly who receives their data, building accountability into every handoff.
- Architected and deployed the platform end-to-end with a deliberately minimal, low-learning-curve interface based on doctor feedback, plus published API specs; 113+ visits in 30 days with zero reported performance issues.
- Led a partnership-first go-to-market plan, pitching MediLink to a state Commissioner of Health for adoption; advanced past the first round of Startup Abuja (500+ applicants), competing for funding and sponsorship.

Web & Operations Developer Summer 2026
Herbal Haven DIY *Remote*

- Joined an early-stage e-commerce startup and turned the owner's requirements into automated systems, building a back-end pipeline for email campaigns and buyer tracking that freed ~5–10 hours/week of manual work.
- Led SEO across site architecture and content, taking the site from no search presence to indexed on Google and driving ~10 new organic visits per day.
- Deployed AI agents for inventory tracking, low-stock alerts, and daily order reporting, giving the owner real-time operational visibility without manual monitoring.

Peer Tutor Spring 2026 – Present
Tutorial Assistance Network *Huntsville, AL*

- Delivered 100+ sessions across 7 subjects to 30+ undergraduates, adapting my approach from session feedback to sustain 90%+ satisfaction, with most students returning for 2–3+ follow-up sessions.
- Noticed students didn't know where to turn for campus support; created a resource guide covering counseling, financial aid, and key services that the tutoring center adopted and now distributes to students.

PROJECTS

Event Planner Manager | Next.js, TypeScript, PostgreSQL, Prisma 2026

- Designed a multi-vendor event marketplace centralizing venue, catering, and decor booking, targeting planners' core pain point: chasing slow vendor confirmations scattered across separate chats and platforms.
- Defined requirements and a normalized 3-entity data model powering a single confirmation view with SMS vendor reminders; validated the design with 10 working event planners and vendors against their own booking requirements.

ER Triage Training Simulation | IEEE Metaverse Grand Challenge 2026

- Designed a timed mass-casualty triage simulation for healthcare learners, using the real START tagging system rather than custom categories so skills transfer directly to real ER protocol.
- Made difficulty adapt to player accuracy and speed and kept case scope narrow to favor learning depth; submitted a working prototype, playtested it with classmates, and identified rendering fidelity as the top next iteration.

Academic AI Tutor | Python, TensorFlow/Keras, Flask | CS-450 2026

- Led a 4-person team from requirements to delivery of an NLP chatbot that classifies student questions and answers from a curated knowledge base across 9 subjects.

LEADERSHIP

Media Sub-unit Lead 2022 – Present
Redeemed Christian Church of God, Jesus House Huntsville *Huntsville, AL*

- Served on the media team since 2022 and promoted to sub-unit lead in 2025; help plan and execute 12+ major events per year for audiences of 100+, from promotion through live AV execution and troubleshooting.

CERTIFICATIONS & SKILLS

Certifications: PSM I Scrum Master (Scrum.org), Leland Product Management Bootcamp, System Design Certificate, CodePath TIP101, Google & TMCF AI Training
Product: Product requirements, user interviews, Agile Scrum, stakeholder communication, go-to-market planning, system documentation
Technical: Python, TypeScript/JavaScript, SQL (PostgreSQL, SQLite), C++, Java, Next.js, React, Node.js, Flask, TensorFlow/Keras, Git
